

Customer Journey Map

Requirement Analysis Phase

Project Name	Automated Network Request Management in ServiceNow
Phase	Phase 2: Requirement Analysis
Author	Darapu Subhakar
Team ID	DARAPUSUBHAKAR-NRM-01
Date	29 June 2026
Platform / Domain	ServiceNow / IT Service Management (ITSM)
Academic Year	2025 – 2026
User Persona	IT Staff / Network Requester (e.g., Developer needing a firewall change)
Goal	Request a critical network configuration change securely and quickly with full visibility to meet a project deadline.

Stage 1: Discovery & Intake

User Actions

- Logs into the ServiceNow Service Portal.
- Searches the Service Catalog for 'Network Requests'.
- Locates the Firewall Rule Change item and opens the request form.

Touchpoints

- ServiceNow Service Portal
- Service Catalog search interface

Emotions

- Cautiously optimistic — relieved to find a structured portal rather than emailing IT.

Pain Points

- Concern about which catalog item is the most appropriate for the specific need.

Opportunities

- Clear catalog item descriptions and a guided category structure reduce selection friction.

Stage 2: Submission & Validation

User Actions

- Fills out the dynamic, conditional Firewall Rule Change form.
- Enters source/destination IP addresses, ports, and business justification.
- Submits the form and receives an automatic submission confirmation email.

Touchpoints

- Catalog variable form
- Notification Engine (submission email)

Emotions

- Confident — the structured form ensures all required information is captured correctly.

Pain Points

- Regex validation errors if IP format is entered incorrectly.

Opportunities

- Inline field tooltips and format examples (e.g., 192.168.x.x/24) reduce input errors.

Stage 3: Approval & Governance

User Actions

- Waits for tracking notifications as the Flow Designer routes the request.
- Manager receives email notification and approves via the ServiceNow workspace.
- Network Security team receives and approves the technical review request.

Touchpoints

- Flow Designer approval engine
- Email notifications
- ServiceNow approval workspace

Emotions

- Patient but monitoring — appreciates real-time email updates at each approval step.

Pain Points

- Approval delays if the manager is unavailable or on leave.

Opportunities

- Approval delegation rules and SLA escalation prevent bottlenecks during approver absences.

Stage 4: Fulfillment & Resolution

User Actions

- Receives confirmation email that the firewall rule is now active.
- Verifies that the required network connection is working as expected.
- Closes out the related project task upon successful validation.

Touchpoints

- Completion email notification
- Network connectivity test

Emotions

- Relieved and satisfied — the request was handled transparently and within the SLA window.

Pain Points

- Possible need for post-implementation verification support if technical issues arise.

Opportunities

- Closure notification includes engineer contact details for immediate post-implementation support.
